AUTONOMIC

INTEGRATORS CHOICE

Whole-home Amplification with eAudioCast™

Configure a complete, decentralised whole-home audio system that resides solely on the network. Proprietary eAudioCast technology allows network streams to be transmitted, received, and distributed across zones on each eSeries amplifier. Integrate amplifiers seamlessly with Media Servers and Streamers to create a harmonious and modern audio system featuring all of the most popular streaming music services and richest digital music files.

Custom installation should be just that – custom. That's why Autonomic products work seamlessly with the industry's leading control systems, including RTI, Crestron, Control4, and more. This deep integration allows users to stay within the control system app, rather than bouncing from app to streaming service. You're in control of your customer's navigation, which means they'll have a better listening experience.

TUNEBRIDGE APP

A streamlined listening experience

Compatible only with the new E Series servers, it expands upon the ability to access all your stored content and streaming services with ease. Autonomic provide video walk throughs of the TuneBridge App, including how to setup Room Grouping and how to create scenes, you can find these on their TuneBridge Vimeo page.

Create Your Scene

Choose specific music and rooms to create a scene you can recall anytime you see fit.

Global Search

Search across all your streaming services and local files simultaneously.

Music-First Approach

TuneBridge allows for a streamlined listening experience across multiple services.

Simple Navigation

An innovative control panel makes it easy to find what you're looking for and puts the most popular functions like Room Grouping, Scenes and favourites just a click away.

MMS-1e

eSERIES

Single Source 24bit/192kHz Mirage Music Streamer

The MMS-1e will support one physical stream mirrored to Analogue, PCM and HDMI outputs. Proprietary eAudioCast technology enables two network streams of audio to be played back via the MMS-1e. eAudioCast network streams are only available for use when the MMS-1e is paired with an 'e' series Digital Amplifier.
